## GIA POLARISCOPE

gempo.jpg

GIA POLARISCOPE WITH 4X LENS AND CONOSCOPE

Product SKU: 415500

**Price:**

Sales price without tax: 350,00 €

### Description

The GIA Polariscopes is used to test the optical properties of gemstones and determine whether a stone is singly refractive, doubly refractive or is an aggregate. Doubly refractive stones may be divided further as to whether they are uniaxial or biaxial. The polariscopes may also be used to detect pleochroism in doubly refractive colored stones. Diamond cutters use the polariscopes to determine the strain characteristics of diamonds.

- Includes an optic figure sphere, removable 4x magnifier, removable sample plate
- The GIA Polariscopes is designed to also provide LED white light source for the GIA Refractometer (not shown)
- Universal 90V - 240V for global electrical compatibility, includes universal plug adaptor
